

*The customizable way to secure enterprise document workflow while empowering your mobile workforce.*

**SmartOffice DevKit** is a full-featured, mobile productivity suite designed for today's mobile devices and workers.

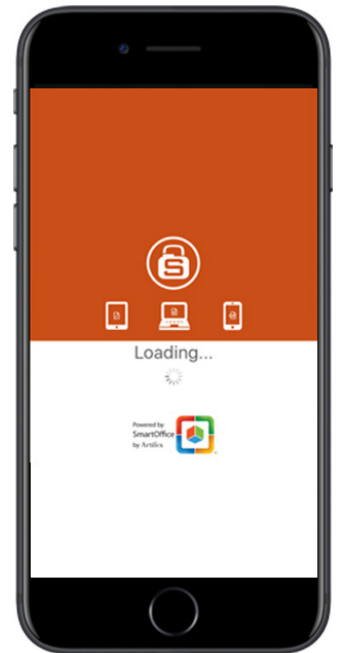

- **Secure Enterprise Content:** Enable enterprise IT to distribute secure and controlled document viewing and editing across multiple platforms.
- **Empower Productivity:** Enables your employees to access, view, edit, create, share, print and present MS Office documents and PDF's...all at their fingertips...without endangering security.
- **Made for Mobile:** Small footprint (30 MB) makes it perfect for smartphones and tablets.
- **Quality Conformance:** Delivers the truest, most accurate representation of MS Office documents available on a mobile device.

## Solve the BYOD Dilemma

When integrated into your company's mobile security platform, SmartOffice DevKit provides a safe way for mobile users to work with MS Office documents regardless of device. Users can view, edit, print, share and present documents on iOS and Android smartphones and tablets within your EFSS, MDM or EMM platform. Enterprise information is secured while employees are productive – it's a win-win!

## Customizable to Your Enterprise Platform

SmartOffice DevKit provides all the functionality and features of our SmartOffice app, but allows companies to customize the document editing controls based on your data leakage policies. The range of productivity features and functionality is secured within the enterprise's encrypted network.

## Enterprise IT Control and Customization

Enterprise IT departments have the ability to prevent data leakage via SmartOffice DevKit's controlled access permission tools that extend down to the user or document level. For further security, SmartOffice DevKit also provides a version that allows only non-editable, view only versions of documents.

Secure permissions that protect potential abuse include:

- Email/sharing file restrictions
- Editing and PDF export
- Save as
- Clipboard access (copy/paste restrictions)
- Camera and image/photo selection
- Printing

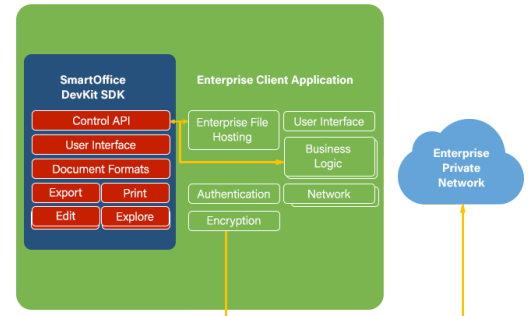

# SmartOffice DevKit Easily Integrates with Your Platform

*Get your solution up and running quickly and efficiently to ensure the security of your enterprise document workflow.*

SmartOffice DevKit fully integrates with your EFSS, MDM or EMM environment, requiring only one integration per platform (e.g., one library works for all versions of Android 5.0). Our scalable display automatically adapts to the device, be it smartphone or tablet. SmartOffice DevKit does not read or write directly to the device's storage; all file content access is via an API, enabling integrators to encrypt the content using their chosen algorithms.

SECURITY FEATURES INCLUDE...	BENEFITS
Save encrypted files through a secure container	Prevent vulnerability due to theft/hacking/malware
Prevent data leakage to clipboard, email, printing, SharePoint	Content contained within the secured perimeter
Control access to corporate documents	Enforce IT policies and compliance
